PROGRAM ELEMENT COMPARISON SUMMARY

INTRODUCTION AND EXPLANATION OF CONTENTS

General Information.

This document provides summary information on the Defense Logistics Agency (DLA) Research, Development, Test and Evaluation Program. This information is specifically prepared for the Office of the Under Secretary of Defense (Comptroller), in support of the OSD/OMB budget review, and congressional committees during the FY 1998/1999 budget hearings. The R-2 and R-3 exhibits provide narrative information on all RDT&E Program Elements (PE) and projects.

Comparison of FY 1997 and FY 1998 Data.

This submission reflects an increase of \$4.6 million in FY 1997 and a net decrease of \$0.141 million in FY 1998 from last year's Congressional Justification Budget Submission due to the transfer of \$5.0 million from DARPA Dual Use Applications Program(DUAP) for the National Center for Manufacturing Sciences (NCMS); net OSD adjustments, inflation reductions, and withdrawal of funds rescinded as part of the FY 1997 DoD Supplemental.

FY 1997 included funding for two congressional adds for Metal Casting and Military Cargo Methods programs under the Logistics R&D program; and one congressional add the Defense Support Activities program for the Data Review and Monitoring Aid (DRAMA) program.

Relationship of FY 1998/1999 Budget Structure to FY 1997 Budget

Beginning in FY 1997, the Defense Manpower Data Center is no longer designated a Defense Support Activity (DSA), but is merged with the Civilian Personnel Management Service, a DoD Field Activity (FA); resulting in a new single organization renamed the DoD Human Resources Activity (DHRA) per PBD 721 against an existing PE 0605803S under Budget Activity 6. Due to OUSD(C) action, funding for PE 0603805S - DUAP for NCMS was transferred from DARPA to DLA in FY 1997 under Budget Activity 3.

On Demand Manufacturing is a new start in FY 1998. This program builds a program started by the Air Force Computer Aided Technology Transfer (CATT) program. CATT establishes a network of companies to produce parts in a very short production lead time with minimum administration. The significant decrease in the DSA PE in FYs 1998 and 1999 reflects the shift in funding to the new DHRA under Budget Activity 6. Due to congressional action, funding for PE 0603753S - Electronic Commerce Resource Centers (ECRCs) was transferred from DARPA to DLA in FY 1998 under Budget Activity 3.

A. Mission Description & Budget Item Justification: The DoD logistics vision calls for providing flexible, cost effective and prompt materiel support, logistics information and services; achieving the leanest possible infrastructure and the employment of the best commercial and government sources and practices. The DLA Logistics R&D program will develop and demonstrate high risk, high payoff technology that will provide a significantly higher level of support at lower costs, than would be otherwise attainable. The DLA program is a key part of the DARPA/DLA Advanced Logistics Program. Focused Logistics is one of the five basic tenants of Joint Vision 2010. The DLA logistics R&D program contributes directly to achieving JV 2010's vision of logistics "support in hours or days versus weeks." The objective of the Advanced Logistics Program is to provide a collaborative environment which will allow the Operations community (J3) and Logistics planning community (J4), TRANSCOM and DLA to seamlessly interact on operations planning and execution of war time operations. In addition, DLA will use the same system in peace time to significantly reduce Logistics Response Time and reduce the cost of DLA operations while maintaining readiness.

UNCLASSIFIED

UNCLASSIFIED

#1 USER-SOURCE LINK: Effort links DoD parts consumers with suppliers, enabling users to decide on price, quality, packaging, quantity, and ordering. Effort will significantly reduce DLA's overhead and inventory costs as more direct vendor deliveries will be attainable.

#2 RULE-BASED DECISIONS: Automates decision processes in buying, cataloging and item management that are strictly rule-based, to increase turnarounds and decreasing labor costs. First thrust concentrates on procurement activities, followed by item management and cataloging functions.

#3 MATERIAL ACQ: ELECTRONICS: Will fund continued enhancement of Generalized Emulation of Microcircuits effort and continue the Advanced Microcircuit Emulation (AME) which started in FY 97. Program reduces weapons system support costs by providing an alternative to circuit board redesigns and lifetime buys. To date, GEM has delivered 14,000 microcircuits of 75 different types to 31 different weapon systems.

#4 ADVANCED TECHNOLOGY LOGISTICS SUPPORT NETWORK (ATSN): Effort develops a total logistics approach to applying advanced decision supports to center's goals well into the next century. Emphasis on cost-effective resourcing for wartime needs, customer choices, and fast, predictable deliveries.

#5 ADVANCED TECHNOLOGY INTEGRATOR: Will demonstrate prototypes of new mat'l handling & distribution equipment in a DoD depots prior to full scale implementation. Targets are storage, distribution and receiving processes, incorporating automatic identification technologies.

#6 FUTURE LOGISTICS R&D REQUIREMENTS: These funds will accelerate the transition of technology to the DLA, so that dramatic improvements in supply support can be undertaken. The alternative is for the Agency to slowly follow in the footsteps of Commercial supply practices, rather than to be the leader in Logistics efficiency, effectiveness and military readiness.

#7 ON DEMAND MANUFACTURING: This cycle time reduction initiative will establish commercial manufacturing capabilities to acquire parts "on demand". Contracting relationships will be established to obtain small quantities of military unique items of low demand, with significantly lower costs and greatly improved response time.

#8 METALCASTING: Cuts costs and reduces lead times of spare parts, by developing concurrent engineering teams to exploit ability of casting technology to reduce part count, tooling costs, and machining costs. In future years will be transitioned to Manufacturing Technology (PE 0708011S).

#9 MILITARY CARGO METHODS: Congressional add to study private sector transport of containerized munitions and third party logistics.

B. Program Change Summary:	Cost in Millions	
	FY97	FY98
President's Budget Submission:	19.357	17.267
Adjustment to Appropriated Value:	- 0.137	----
Current Budget Submission	19.220	17.267
		17.788

Change Summary Explanation:

Funding: FY 97 net adjustments reflects \$95K OUSD General Reduction and \$42K withdrawal of funds rescinded as part of the FY 1997 DoD supplemental.
Schedule: No Significant Changes

Technical: No Significant Changes.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE: SEPTEMBER 1997							
APPROPRIATION/BUDGET ACTIVITY: RDT&E, Defense-Wide/Budget Activity 3		Program Element: 0603712S LOGISTICS R&D TECHNOLOGY DEMONSTRATION							
COST (MILLIONS)	FY 97	FY 98	FY 99	FY 00	FY 01	FY 02	FY 03	COST TO COMP	TOTAL
#1: USER-SOURCE LINK	4.479	4.800	3.900	3.900	0.0	0.0	0.0	0.0	17.079

A. Mission Description and Justification:

User-Source Link will dramatically change the current logistical system as it exists today. DLA will offer users choices on sourcing, packaging, quality levels and shipping that were previously decided by our Inventory Control Points. The user will also be able to place the order on a pre-negotiated price schedule established by DLA. This will be accomplished by linking the user of parts with the suppliers. The initial phase will involve linking users to suppliers through a set of query servers. This will eliminate the need for suppliers to continually provide product information updates to the Government. Instead, the query servers will go to the suppliers organic product databases and retrieve the information for the user. The final phase of this effort will involve the use of "Agents." Software agents will travel between suppliers catalogs retrieving the information requested by the user without the use of query servers.

This project is needed to provide the DoD's customers with the information they need to make an informed buying decision. It will enable DLA to significantly reduce its overhead costs which are ultimately passed on to our customers. More direct vendor deliveries will result from this link which will reduce inventories. The use of suppliers part data will reduce the need for establishing NSNs and other cataloging data. Post-acquisition support problems and the resources necessary to solve them will go down as the user can interactively make their specific requirements known.

(U) Program Accomplishments and Plans:

(U) FY 1997:

- Develop data gathering tools and automated supply tools. Access to stock held in commercial inventory has been demonstrated as well as the ability to place credit card orders and military requisition, though the US Link technology.

(U) FY 1998:

- All DLA managed items will be visible and availability to order by DLA customers regardless of whether the stock is held by DLA Depots or in private industry's finished goods inventory.

#2: Automate Rule-based Decisions	2.912	2.300	2.300	1.900	0.000	0.000	0.000	0.000	4.412

A. Mission Description & Budget Item Justification
 Over 97% of DLA's procurements involve small purchases. Small purchases are very straightforward and lend themselves to automation. 20% of these actions are currently performed untouched by human hands. Because the remainder are mostly based on sets of rules, further automation could result in as many as 70% of all buys being automated. The second phase of this effort would address rule based decisions in cataloging and item management processes. Significant labor savings will result through the automation of many of these currently manual processes. The research will involve identification of those rule-based decisions that lend themselves toward automation, resolution of overlapping or conflicting rules, software development, demonstration, beta-site testing, feedback analysis and corrective action.

(U) Program Accomplishments and Plans:

(U) FY 1997:

- Demonstrate natural language processing for automation formulation of contracts.
- Develop technology for rapid reconfiguration of decision processes.

A. Mission Description & Budget Item Justification
 Develop a capability to emulate most obsolete digital integrated circuits (ICs) in the federal catalog using a single, flexible manufacturing line. DoD has estimated that \$2.9B is spent every five years in redesigning circuit card assemblies. Much of these redesigns are driven by IC obsolescence. The commercial suppliers of ICs typically terminate production lines every 5 years, moving on to the next generation of ICs. Because DoD maintains weapons systems much longer than 5 years, this creates an obsolescence problem that can only be overcome through buying excessive inventories of parts before the production lines close or redesigning the next higher assembly to eliminate the obsolete part. DLA, as the manager of over 80% of the IC supply class, must have a capability to manufacture these devices. This project will develop this capability and expand it to the succeeding generations of obsolete ICs through the Advanced Microcircuit Emulation program.

(U) Program Achievements and Plans:

(U) FY 1997:

- Development and demonstration of emulated microcircuits needed for the following systems: F-14; F-15; F-16; F-18; JTIDS; UYK-43; UYK-44; AEGIS; JSTARS, SPACE SHUTTLE; TRIDENT; BSY-2; AWACS; CG-47; DESC(Various Users).
- Developing GEM devices: 66 New Part Types; 17,000 devices.
- Achievements: Field GEM Production Program (next Generation Emulation) begins emulates micro controllers & microprocessors, ASICs, LSI, VLSI, and Analog Devices.

A. Mission Description and Budget Item Justification

Advanced Technology Logistics Support Network initiative will reduce DoD inventory requirements by substituting immediate access to commercial sector inventories for stocks held in a DoD warehouses. Its objectives include creating a virtual inventory by tapping into worldwide commercial inventories; providing a full array of leveraged prices; providing a variety of delivery methods; providing graphics and on line help which will allow customers to fully explore an item's specifications, warranty and past performance; and creating a seamless catalog which integrates commercial catalog data with DLA negotiated prices. The program proposal seeks to allow DoD customers to conduct business on the Internet; utilize application scanners to remove the barriers of software language; link databases across government and industry via hyperlink technologies; and finally use hypertext markup language to merge government database information onto the Internet.

The ATSN program has far reaching applicability in allowing DLA and its customers to fully capitalize on the logistics related information technology advancements currently available. The program will bring this advanced technology to both peacetime customer support and mobilization support. These new technologies are critical elements to the achievement of DLA's programmed outyear savings in conjunction with implementation of reengineering initiatives and acquisition reform.

(U) Program Accomplishments and Plans:

(U) FY 1997:

- Demonstrate virtual inventory access in a distributed environment using state of the art human computer interface tools.
- Develop servers for rapid supply service and integrate with transportation and sustainment servers.

#5: ADVANCED TECHNOLOGY INTEGRATOR	1.592	1.800	1.860	2.100	2.500	2.600	2.700	Cont.	Cont.

Advanced Technology Integrator

A. Mission Description & Budget Item Justification:

The DoD has pursued material handling and distribution technologies in the past by identifying promising commercial technologies and installing them in our depots, many times in the absence of quantifiable benefits. This has resulted in identified challenges concerning realistic benefits, system interoperability, and resource/personnel capability. The Advanced Technology Integrator will eliminate these problems by providing a "try before you fly" capability where equipment can be simulated in a live depot environment prior to full-scale implementation. A demonstration center would be created. Tasks would be executed by the center in order to fully evaluate promising technologies or new concepts.

The impact of the Advanced Technology Integrator would be lower depot overhead costs associated with the receiving, storage, and issuing processes.

(U) Program Achievements and Plans:

(U) FY 1997:

- Development of virtual test-bed for depot operations.
- Development and demonstration of freight manifest automation.
- Development of sentinels for in-movement monitoring of material.

#7: On Demand Manufacturing	0.0	0.967	0.928	0.910	0.947	1.000	1.000	Cont.	Cont.

A. Mission Description & Budget Item Justification:

This initiative is necessary to identify and establish commercial manufacturing capabilities so that DLA Centers can acquire parts as they are needed (on demand) rather than investing in excessive stock, or risking non-availability of essential parts when needed. Contracting relationships will be established to obtain small quantities of military unique items of low demand, with significantly lower costs and greatly improved response time. This is an effort to use private sector manufacturers, in addition to all other measures to obtain parts quickly. In FY98 it builds a program related to the USAF Computer Aided Technology Transfer (CATT) program. CATT establishes a network of companies to produce parts in a very short production lead time with minimum administration.

(U) Program Achievements and Plans:

(U) FY 1997:

- Seven ODM contracts have been awarded with an average reduction in production leadtime of 59% (221 days to 90 days). The ODM tools have entered beta testing.

A. Mission Description & Budget Item Justification: This is a Congressional Add that says: "The conferees believe opportunities exist to use modern cargo handling methods and technology developed in the private sector to improve efficiency, safety and security of moving cargo across the nation and around the world. Of the funds provided...the conferees have designated \$1,000,000 only for a not-for-profit trucking research institute engaged exclusively in motor carrier R&D to (1) establish the manner and extent to which private sector land transport experience, equipment, and procedures can be adopted to improve the efficiency, safety and security of loading and transporting military containerized ammunition to DoD load out ports and air cargo facilities; and (2) examine, measure, and inventory the expertise and capability of private sector third party logistics providers to provide the Defense Logistics Agency with cheaper and more efficient logistics services in keeping with the requirements of the Government Performance and Results Act of 1993." DLA plans to use this funding to satisfy this defense requirement via two study efforts with contracts to be let by the Military Traffic Management Command (MTMC) to study movement of ammunition (\$693K); and DLA to study use of third party logistics firms (\$297K).

TOTAL PROGRAM ELEMENT	-	14.972	-	-	-	-	-	14.972	14.972
Electronic Commerce Resource Centers (ECRCs)	-	14.972	-	-	-	-	-	14.972	14.972

A. Mission Description & Budget Item Justification: The mission of this program is the transfer of electronic commerce (EC) technologies to small- and medium-sized enterprises (SMEs) through a network of regional deployment centers. This mission is a subset of the overall Acquisition Reform Initiatives. The regional ECRCs provide training and technical assistance to aid SMEs in defense supply chains in making effective use of electronic commerce technologies. The ECRC Technology Development Activity keeps abreast of EC technologies and ensures that technical specialists in the regional ECRCs are equipped with the latest information and training on EC technologies.

B. Program Change Summary: At the request of DUSD(L), beginning in FY 1997, DLA assumed responsibility for the funding, management, and control of the ECRC program while DUSD(L) acts as program sponsor.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2
Exhibit)

DATE: SEPTEMBER 1997

APPROPRIATION/BUDGET ACTIVITY:

RDT&E, Defense-Wide/Budget Activity 3

Program Element:

0603805S DUAL USE APPLICATIONS PROGRAM

COST (MILLIONS)	FY 97	FY 98	FY 99	FY 00	FY 01	FY 02	FY 03	COST TO COMP	TOTAL
TOTAL PROGRAM ELEMENT	5.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	5.000
#1: National Center for Manufacturing Sciences (NCMS)	5.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	5.000

Mission Description & Budget Item Justification: The Defense Logistics Agency (DLA) has implemented policies and practices to reduce its operating and support costs while providing service to military customers. DLA continues to focus on issues such as total asset visibility; information technology, security and integration; diminishing sources; small-lot-volume manufacturing; privatization and outsourcing. This program depends on the National Center for Manufacturing Science (NCMS), as a not-for-profit consortium of about 235 defense and non-defense industry members, to provide DLA direct access to the best commercial practices, manufacturing technology, and out-sourcing lessens learned, and more information that is currently resident with the membership. NCMS will perform the accounting, contracting and legal, administrative and program management functions for each project, and will interact with industry, state and other federal agencies, other small consortia, and academia. NCMS has consistently provided cost sharing of 2 to 1 for its non-member partners in the execution of collaborative projects, which have resulted in a substantial return on investment. Funds of \$5.0 million were transferred from DARPA to DLA in August 1997 per OUSD(C) and DUSD(L) direction, under an existing Dual Use Applications Program, and DLA-MMPRT has been assigned responsibility for program management.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE: SEPTEMBER 1997

#1: National Center for Manufacturing Sciences (NCMS)	5.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000

A. Mission Description and Justification:

Program Element: One of the initial projects among the NCMS programs, Commercial Technology for Maintenance Activities (CTMA), will dramatically change the current logistical system as it exists today. DLA will be able to develop and offer users new repair technologies, business practices, sourcing, management and controls that were previously not available through normal contracting practices. The initial phase of CTMA will involve evaluation of selected candidate projects by a Cost Analyst who will determine the benefit and pay back to DoD. If the evaluations confirm expected benefits, the projects will be funded. The later phases of this effort will involve development of formal statements of work, the designation of performers and project managers, and the execution of the projects leading to implementation and realization of the expected benefits.

(U) Program Accomplishments and Plans:

(U) FY 1997:

- Identify candidate projects for cost/benefit analysis
- Perform cost/benefit analysis for management review and assessment
- Initiate selected projects, using NCMS for detailed management, responsible to MMPRT.

(U) FY 1998:

- All DLA managed projects will be visible to management, with metrics used to measure success being applied so that the benefits can be realized from implementation.

A. Mission Description & Budget Item Justification:

Manufacturing Technology (Man Tech) reduces costs and lead times, and increases quality, by developing and applying advanced manufacturing technology. DLA ManTech includes Combat Rations Network for Technology Implementation (CORANET), Apparel Research Network (ARN) American Metalcasting Consortium (AMC).

CORANET assures combat ration availability of specified variety, quality and affordability to the Components through commercial-military integration, ration processing and packaging research, and menu variety and producibility improvement. CORANET is part of the Joint Director of Laboratories Advanced Industrial Practices Strategic Plan.

ARN concentrates on achieving customer driven uniform manufacturing by establishing electronic links among all participants in the supply chain from the end user to the fabric supplier. The program is part of the Joint Director Of Laboratories Advanced Industrial Practices Strategic Plan.

AMC reduces the lead time of weapons system metal castings with Castings Advanced Systems Technology - Integration Teams (CAST-IT), by deploying advanced design and acquisition processes, and by improving foundry processes. AMC is part of the Joint Director of Laboratories Metals Processing Strategic Plan.

<p>Apparel Research Network (ARN)</p> <p>A. Mission Description & Budget Item Justification</p> <p>The Department of Defense, through the Defense Logistics Agency, purchases an average of \$1 billion of clothing and textile items per year. Our current leadtime is up to 15 months and our current inventory acquisition value is over \$2 billion. ARN is a Manufacturing Technology program to improve the responsiveness of the industrial base that supplies the clothing items to the Military Services. It enables the small business oriented apparel producers to access state-of-the-art technologies through its R&D and technology transfer mechanism. The goal of this program is to reduce the average apparel leadtime from 6 months to 6 weeks and to reduce the inventory carrying costs by 50%. A 50% reduction in carrying cost would reduce the cost to the customer by 20%.</p> <p>(U) <u>Program Accomplishments and Plans:</u></p> <p>(U) FY1997: Completed program road map and business case. Successful implementations at Defense Apparel Manufacturer sites: a. Automation for BDU Pocket Flap Fusing operation b. Apparel Information Management System for automating military specific processes. c. Modular Manufacturing Modules for better worker morale, lower Work-In-Process level and better quality product.</p> <p>Developed Balanced Inventory Flow Replenishment System for defense manufacturer's to accurately predict future demand and to meet quick response goals. (U) FY 1998 Implement Electronic Ordering Forms via Internet for special measurement orders. Field test 3-D Whole Body Scanning for Customer Driven Uniform Manufacture at the Marine Corps Recruit Training Center in San Diego, CA. Conduct Virtual Prime Vendor demonstrations (Clemson and Cal Poly) that provide supply chain asset visibility, automated electronic ordering process and inventory forecasting capabilities. The initial objective is to assist the two Marine Corps Recruit Training Centers (Parris Island and San Diego) to minimize retail inventories and ultimately to assist DLA ICP (DPSC) to reduce system-wide wholesale inventories.</p> <p>B. A. Mission Description and Budget Item Justification

0001 The Joint Service programs were established by the Secretary of Defense to improve the training and readiness of the Active and Reserve Components. The PE is located in Budget Activity 6, RDT&E Management Support to expedite the prototype development of new training and readiness technologies and Joint Service training and readiness systems to improve the training and readiness effectiveness and enhance the performance of the military forces. It also facilitates the sharing of training and readiness information, while allowing for the transfer of emerging and innovative technologies among the Services and private sector.

0002 This project supports the Defense Human Resources Activity (DHRA), and DoD training managers (OSD, Joint Staff, Unified Commands, and the Services) in promoting more efficient and effective use of training resources, increasing the effectiveness of military training and enhancing the readiness and performance of the military forces. Projects analyze the contributions to readiness of various training techniques and programs and use the results to expedite new training concepts and procedures that increase unit effectiveness or decrease costs. Emphasis is placed on developing analytical tools and systematic methodologies to improve training resource allocations.

0003 The project is located in Budget Authority 6, RDT&E Management Support, to administer testing programs which enable the Armed Services to select highly qualified military recruits. The DoD uses a single test, the Armed Services vocational Aptitude Battery (ASVAB) to determine eligibility of military applicants and to report recruit quality data to Congress. High quality recruits are obtained from administering the ASVAB annually to approximately 600,000 applicants for Military Service as part of the DoD Enlistment Testing Program, and to 1 million students in the DoD Student Testing Program. Each Service also uses ASVAB test forms developed in this program as part of their in-service testing programs.

A. Mission Description and Budget Item Justification: (Continued)									
0003 New ASVAB test forms and related support materials are implemented every four years. This allows DoD to make measurement improvements as well as decrease the likelihood of test compromise. Ongoing RDT&E efforts control functions include development and evaluation of procedures (1) reduce or eliminate threats to the validity of the ASVAB test scores generated; (2) improve the efficiency of the test development, calibration, and validation process; and (3) improve selection and classification decisions made by each Service through more effective use of test score information. In addition, periodic assessments are required to provide DoD manpower planners and Congress with information on aptitude trends in the population from which recruits are drawn.									
B. Program Change Summary

A. Mission Description and Budget Item Justification

(U) This program element is found in Budget Authority 6, RDT&E Management Support to provide engineering, scientific, and analytical support to the Office of the Director, Defense Research and Engineering (ODDR&E) in its responsibility for direction, overall quality, and content of the Science and Technology (S&T) program and ensuring that the technology being developed is affordable and minimizes system development risk. The primary purpose of program element is to facilitate the development of the S&T program and conduct assessments and analyses of the S&T program to ensure maximum utilization of Research and Development funds to accomplish the overall objectives of the S&T program. Funds are required for personnel, technical and analytical support, equipment, supplies, travel, utilities, communications and facilities.

Cost in Millions	FY 97	FY 98	FY 99	FY 00	FY 01	FY 02	FY 03	Cost to Complete	Total Cost
0005 DRAMA/WSSP	2,375	-----	-----	-----	-----	-----	----	0.0	2,375

A. Mission Description and Budget Item Justification

FY97 Data Review Analysis and Monitoring Aid (DRAMA)/WSSP

DRAMA is an enabling technology that allows continuous exchange of management data throughout the life cycle of weapon systems. This technology improves and automates existing inventory control and distribution processes. It improves managers access to scheduled maintenance activities and the resulting impact on item demand. The technology developed in DRAMA is being applied to the expansion of the Weapon System Support Program (WSSP) per DoD IG report number 97-041 dated 10 December 1996. Benefits include reduction in 2nd and 3rd generation shipping delivery cost, time, and storage; reduction of inventory storage facilities and support personnel. DLA historically has operated in a reactive mode relying on historical demand without insight into service programmatic data and scheduled maintenance cycle. The technology injects expert system technology and utilizes trend analysis techniques to place DLA in a cost effective predictive posture. This capability allows DLA to anticipate requirements, analyze performance in the execution of those requirements and accomplish real time support process adjustments as necessary to provide as close to just-in-time materiel support to the user as practical. The described system, coupled with the interactive materiel management databases, will have the capability to interact with mission and design changes as they occur and predict the effect of those changes on the materiel support requirements of the customer. Feedback information will be provided to both DLA and the customer automatically. The closed loop feed back will be facilitated over the common operating environment infrastructure. This program reflects a congressional add in FY 97.

A. Mission Description and Budget Item Justification: The Defense Technical Information Services Program Element provides resources for the Defense Technical Information Center (DTIC) and the DoD Information Analysis Centers (IACs). DTIC's mission and function is to provide for the centralized operation of DoD Services for the acquisition, storage, retrieval, and dissemination of Scientific and Technical Information (STI), including data which is restricted, controlled and/or classified. DTIC also functions as the central activity within the DoD for exploring and applying advanced techniques and technology to DoD STI systems and for developing improvements in service and STI transfer effectiveness, and administratively manages the IAC program. DTIC's concept of operations is to function as the "front" door to DoD unclassified and unlimited information resources for customers internal and external to DoD; as the door to controlled information resources for internal DoD use; and as a repository and processor for STI. The Information Analysis Centers, each devoted to a particular technology area, are part of the program to share information resources in a coordinated manner and further leverage the technology base by maintaining a staff of subject experts to provide in-depth analysis and to create specialized technical information products. The maintenance of a centralized program is a cost effective and efficient means to provide access to and transfer information among DoD personnel, DoD contractors and potential contractors, and other federal agencies and their contractors. Program Element is under BA 6, Mission Support, which provides for the support of operations required for use in general research and development and not allocable to specific missions.

Mission Description and Budget Item Justification: DTIC collects or electronically connects to sources of information generated by the DoD or information relevant to its mission. DTIC's collection efforts reflect the immediate and long-term information needs of the DoD community. The primary focus is on acquiring current documentation and management summaries to support a DoD component's mission responsibility. DTIC acquires scientific, technical, engineering, management, studies and analysis, and other types of information, in any media or format, which meets the needs of the Defense community. That information is then disseminated electronically, on paper, or on other physical media, to others in DoD to help accomplish DoD-related business. DTIC's holdings include technical reports, management summaries at the work unit level, Independent Research and Development summaries, and special collections such as captured German and Japanese documents that date back to World War II. DTIC's role is to ensure that all significant or technological observations, findings, recommendations and results derived from DoD endeavors are accessible to authorized users. For the United States to maintain its readiness and competitiveness with the industrialized nations, such scientific and technical information must be readily available and easily transferable. DTIC is moving aggressively to fully exploit the benefits of electronic information dissemination of its internal collection as well as developing tools to access external databases, and to reach end users (scientists, engineers, R&D managers, etc.) in rapidly increasing numbers. Using the latest computer and communications technologies, we provide annually nearly one million documents and research and development management information summaries to our users, in addition to more than a half million on-line interrogations of our databases, and have developed and host over 90 web sites. The military, universities, managers, scientists, engineers, and contractors look to DTIC for leadership in the advancement of information access and sharing. DTIC currently serves more than 4200 organizations located in the U.S. and overseas.

APPROPRIATION ACTIVITY		R-1 ITEM NOMENCLATURE
0400/06 MISSION SUPPORT		DEFENSE TECHNICAL INFORMATION SERVICES
		PE 0605801S

FY 1997 ACCOMPLISHMENTS:

- Ongoing Operations - Basic operation of DTIC including the output of products and services, personnel, maintenance of equipment, and payment for support services, i.e. personnel processing, building services and maintenance, legal support, etc., paid to other government agencies via Interservice Support Agreements. (\$27.408 Million)
- Improved Access, Dissemination and Use of Information - Funded efforts to capture information, including full text STI, in the electronic form from contributors and efforts to improve methods to collect, index and store information at DTIC or through remote access. Modernization efforts included implementing electronic input and storage of classified as well as unclassified documents in the Electronic Document Management System and continued development of multimedia applications to include the addition of audio/video media. Included continued utilization of the Internet to disseminate information and development of tools like OmniPort which provide a user friendly interface to multiple information sources. Explored new methods of encryption and authentication to protect classified and unclassified but sensitive information. (\$2.321 Million)
- Business Process Reengineering - Managed the Business Process Reengineering (BPR) effort for the Director, Defense Research and Engineering (DDR&E). Effort consists of reengineering S&T processes to achieve greater mission effectiveness and standardizing business management data to promote interoperability, minimize duplication, and enhance information available to the decision maker at all levels. Some products of these efforts included; reengineering the data collection process/method used to publish the 1996 RDT&E In House Activities Report, the introduction of the Science and Technology INFOWEB which provides decision makers a single source with accurate and reliable information to effectively manage the S&T Program and the development of collaboration tools which is used by the DDR&E staff and Reliance (a Joint Service/Agency group) to update selected Defense S&T Planning Documents. (\$2.305 Million)

FY 1998 PLANS:

- Ongoing Operations - Basic operation of DTIC including the output of products and services, personnel, maintenance of equipment, and payment for support services, i.e. personnel processing, building services and maintenance, legal support, etc., paid to other government agencies via Interservice Support Agreements. (\$29.019 Million)

September 1997

FY 1998 PLANS CONT:

- Improved Access, Dissemination and Use of Information - DTIC will begin development of a Defense Virtual Library that will identify key government and commercial information resources and present them in a customized, integrated manner to foster collegial effort in specific DTIC communities. Develop and test an interface to facilitate the exchange of electronic documents between DTIC, its contributors, and its customers. Complete system specification and initiate software development for Full Operating Capability (FOC) of EDMS. FOC includes implementing new search and retrieval capabilities, electronic delivery of documents, and multi-level security. Complete development and operational testing of an enhanced security version of OmniPort which provides access to unclassified but limited data. Multimedia information products that operate in multi-platform environments and are capable of real time video streaming will be introduced. (\$3.005 Million)
- Business Process Reengineering - Continue management of BPR effort for the Director, Defense Research and Engineering (DDR&E). Efforts consist of reengineering S&T processes to achieve greater mission effectiveness and standardizing business management data to promote interoperability, minimize duplication, and enhance information available to the decision maker at all levels. (\$2.600 Million)

FY 1999 PLANS:

- Ongoing Operations - Basic operation of DTIC including the output of products and services, personnel, maintenance of equipment, and payment for support services, i.e. personnel processing, building services and maintenance, legal support, etc., paid to other government agencies via Interservice Support Agreements. (\$29.849 Million)
- Improved Access, Dissemination and Use of Information - DTIC continues its efforts to improve the capture and distribution of information in the electronic form and to move to paperless information management. Initiate full operational capability of the Electronic Document Management System. Continue development and implementation of OmniPort by fielding the enhanced security capabilities, and completing operational testing of advanced search, retrieval and analysis tools. DTIC will begin efforts to provide classified multimedia products. (\$2.330 Million)

A. Mission Description and Budget Item Justification: The IACs are contractor operated research organizations chartered by OSD to collect, analyze, synthesize and disseminate worldwide scientific and technical information in specialized fields to prevent re-inventing research and to promote standardization within these fields. The IACs are staffed with subject experts to provide compilation of information, synthesize and evaluate it for relevancy to specific inquiries, supply in-depth analysis services and create specialized technical information products. IACs respond to technical inquiries, prepare state-of-the-art reports, handbooks and databooks, perform technology assessments, and support exchange of information among scientists, engineers, and practitioners of disciplines within the scope of the IAC. The DoD IAC program continues to experience significant growth in work requirements. This growth can be attributed to DoD customers recognizing that IACs can be used to synthesize existing information and provide expert technical advice resulting in better use of diminishing RDT&E and procurement resources. There are 23 DoD IACs, 6 operated within the Army (using Army personnel to perform IAC functions), 2 by the Air Force, 1 by the Navy, 1 by Defense Special Weapons Agency (DSWA) and 13 funded and managed by DTIC. This project funds the basic operations described above for the DTIC managed IACs as well as the IAC Program Management Office (PMO) located at Ft. Belvoir. The program office provides management and oversight of the 13 DTIC funded IACs. The PMO also promotes DoD IAC awareness, acts as liaison between government and contractors, writes and implements policy, establishes infrastructure and maintenance, and provides operational forces technical support. Acquisition functions performed by PMO include primary contracting officers functions and contracting officers technical representative functional oversight. DTIC and its IAC program are the central source for scientific and technical information and support for the Defense research community and war fighting commands.

DEFENSE TECHNICAL INFORMATION SERVICES

PE 0605801S

FY 1997 Accomplishments:

- Funds personnel and operational costs for the IAC Program Management Office. Raised IAC awareness in all three services by waging a vigorous campaign of education and information to encourage use of IAC expertise. To promote efficiency, the PMO consolidated the IACs from 15 to 13 and added two additional technologies - Advanced Coatings and Organic materials. PMO expanded promotion efforts to include both the acquisitions and operations communities. This effort promoted communication among the communities thereby merging operational requirements with available technologies to shorten acquisition lead time and more closely relate research and development to the needs of the warfighter. Continued efforts to work toward a paperless office by expanding the electronic Office Filing System (OFS) to include receipt of electronically transmitted documents and integration with other office programs. Expanded Performance Results Evaluation & Management Information System (PREMIS), previously called "Technical Area Task Tracker & Reporting System" to accommodate compliance with GPRA at all IACs. Increased use of electronic communication through the Internet and established INTELINK connections at Secret and Top Secret Levels (\$1.248 Million).
- Provides basic operational support for the DTIC sponsored, contractor operated IACs (\$10.033 Million).

Examples of accomplishments include:

- Enhanced and expanded the traditional roles of the IAC.
- Established knowledge based tools to allow end user to connect with relevant information more directly and easily.
- Analyzed and developed performance metrics and measures. Reviewed managerial accountability, flexibility, budgeting and preparation of performance measurement documents for the IAC program, in support of GPRA.
- Reprocured 5 IACs, including contract close-out and transfer of databases and equipment to new contractors.
- Supported DoDs newest and most critical technology threat by establishing the Information Assurance Technology IAC (IATAC).
- Met the growth in demand for S&T information support by performing an increased level of tasks and responding to increased level of inquiries.

FY 1998 PLANS:

- Funds personnel and operational costs for the IAC Program Management Office. Promote and expand IAC awareness, continue to host numerous Information Center Symposiums to bring all DoD and other government agency IACs together into a common forum, and promote cooperative teaming of IAC capabilities and broaden our information leveraging capabilities. Automate internal Office Filing System (OFS) to accept delivery of data from multiple external databases. Integrate OFS and the Performance Results Evaluation & Management Information System (PREMIS), providing the capability to track and generate work unit information and technical report documentation into a seamless process. Expand PREMIS to include secure acquisition system environment, facilitating the acquisition process, lessening cycle time, and lower procurement costs. Develop tools for application of information transfer at TOP SECRET level (compartmental) for INTELINK. Investigate new technology areas for possible incorporation into the IAC program. Meet the increased demand for S&T tasks and inquiries caused by the disassembly of organizational in-house S&T information functions. Identify government information collections abandoned by disestablished organizations that should be transferred and incorporated into the IAC program (\$1.581 Million).
- Provides basic operational, technical monitor, and security office support for DTIC sponsored, contractor operated IACs (\$10.725 Million). Examples of planned accomplishments include:
 - Expand DMSTTIAC to incorporate the growing needs of the Modeling & Simulation communities and support to acquisition and training communities including CINCs.
 - Pursue the development of the ability to monitor foreign capabilities through links established with DoD operational and intelligence communities.
 - Continued enhancements to the IAC hub and home pages including automated feedback forms and automated responses to requests for information.
 - Re-compete 3 DoD IACs. Realign and/or close selected IACs in order to continue support of the most significant current Defense Technology Objectives within current budget restrictions.

PE 0605801S

FY 1999 PLANS:

- Funds personnel and operational costs for the IAC Program Management Office, to include the promotion and expansion of IAC awareness, continue to host annual scientific and technical IAC Information Symposiums to bring all DoD and Government agency IACs together into a common forum to promote cooperative teaming of IAC capabilities and broaden information leveraging capabilities. Expand awareness of the IAC program and its capabilities in DoD and non-DoD communities. Continue integration of PREMIS and OFS with the capability to track and generate work unit information and technical report documentation into a seamless process. Expand database interfaces and integrate tools for application of information to complete the OFS paperless office environment. Identify and manage government information collections abandoned by disestablished organizations that should be transferred and incorporated into the IAC program. Conduct competitive procurements of new and existing IACs (\$1.788 Million).
 - Provides basic operational, technical monitor and security office support for the DTIC sponsored, contractor operated IACs (\$ 10.588 Million). Examples of planned accomplishments include:
 - Enhancement and continued monitoring of secure systems.
 - Establishment and/or enhancement of foreign exchange of authorized information through links previously established with DoD operational and intelligence communities.
 - Acquire and/or incorporate technology to access, receive and/or disseminate information from multiple databases, simultaneously.
 - Acquire technology to link the warfighter directly to IAC databases and inquiry services for real-time on-line access.
 - Pursue implementation of state of the art electronic technologies to meet requirements of IAC user communities.
 - Implement Information Operations stealth tools to automate and disseminate classified information through secure networks.
 - Pursue, identify, develop and/or implement new and innovative technologies with potential for overcoming existing barriers to information communication among the IAC user communities.
 - Continue realignment of IACs in support of Defense Technology Objectives within current budget constraints.
